

POLITECNICO MILANO 1863

High Performance Scientific Computing for Aerospace Project

15th October 2025 update

October 15, 2025

- Defined the data structures needed.
- Separation of roles and classes.
- High-level implementation of the code.

- Computation of grid and viscosity.
- Establish the order of nodes to maximize performance.
- Potentially excessive memory usage.

- Optimization of the storage in data structures.
- Complete the definition of the data structures for β and γ .
- Discuss about the parallelization strategy for the solution of linear systems.
- Actual implementation of code.
